In just three decades, AKG research has resulted in numerous significant acoustical developments reflected in over 600 worldwide patents in:

**MICROPHONES:**

Condenser, electret and dynamic. *Plus* a complete line of microphone accessories, stands, stand accessories and the new MCH Series microphone cables.

**HEADPHONES AND BOOMSETS:**

Stereo and Monaural.

**REVERBERATION UNITS:**

The renowned BX-20E and new portable BX-10E. Both with torsional transmission line spring systems.

**PHONOCARTRIDGES:**

For home, studio and disco.

THE JOURNAL OF COLLEGE RADIO is published semi-monthly (October, November, February, March, April) by the Intercollegiate Broadcasting System, Inc. (a non-profit organization). Editorial, publishing and sales offices are located in New York State. Address all correspondence to The JOURNAL OF COLLEGE RADIO, Box 592, Vails Gate, N. Y. 12584.

The JOURNAL OF COLLEGE RADIO was founded in 1941 by the Intercollegiate Broadcasting System, Inc., using the title *IBS Bulletin*. The name was changed in 1955 to *IBS Newsletter*. In 1964 it became *College Radio* and in 1969, *The Journal of College Radio*.

Annual subscription price is \$5.00. Single copy price \$1.00, and the Annual, \$4.00. Outside the U.S.A. add \$1.00 per year for postage.

Send subscription order and changes of address to Circulation, The Journal of College Radio, P. O. Box 592, Vails Gate, N. Y. 12584. On changes please include both old and new address plus address label from back of Journal if possible.

Printed by Commercial Offset Printers, Inc., New Windsor, New York  
 Graphics by Anchor Studio, Goshen, New York

Application to mail at second-class postage rates is pending at Newburgh, N. Y. 12550

## **One of the things RCA does best is help keep your lights lit.**

With tubes — camera, receiving and power. SK replacement semiconductors along with a complete stock of RCA exact replacement parts.

RCA's new Distributor and Special Products Division can supply them all. And more.

It's certain to make all your

broadcast and broadcast maintenance needs much simpler to meet. With a minimum of panic and a maximum of efficiency.

Our new division was set up to make your life a lot easier, and to keep you "on-air" more dependably. It's ready to start doing it. Now.

For full information, check with your RCA Distributor or contact RCA Distributor and Special Products Division, Bldg. 206-2, Cherry Hill Offices, Camden, New Jersey 08101.

In Canada, contact RCA Limited, Distributor and Special Products Division, Sainte Anne-de-Bellevue, P.Q.

# From the editor

Welcome once again, this time to the second issue of JCR for the 1976-77 academic year. This is the **Annual Directory** of IBS member stations, the issue that lists all of the stations who are associated with the Intercollegiate Broadcasting System in order of their location and their educational institution. It is our hope that you will use this directory often, either as a means of obtaining information about your fellow stations, or as an aid to **inter-station contact**. There might be another radio station just around the corner that you didn't know about, so give 'em a call sometime . . . you both might profit from it.

One thing to remember. If your station is not given a complete listing, it's probably because you joined IBS too late for inclusion, or, we did not receive a completed Data Banc form from you. These sheets are sent out to member stations in the spring and summer, so keep an eye out for them early next year. If your station is not listed at all, it's probably because you are not listed as an IBS member. Again, this could be because your station joined too late for the magazine deadline.

Last issue, there was much talk about the FCC matters, and how they might affect different kinds of college and high school broadcasters. At the time, it looked like some sort of decision would be made by the following month, so we promised the "final" word on the two dockets, to be announced in this issue. Well, one should never count on governmental decisions before they are hatched, and it looks like that's just what we did. As a matter of fact, since last month, nothing at all has been decided by the FCC, except for one important thing. On September 27, the commission announced that it was extending the deadline for filing comments in the matter of docket 20735. That's the docket that relates to noncommercial FM broadcasters, and those who plan to apply for FM facilities. The fact that the deadline has been extended means that there is now more time for college radio people to file their own comments, and there is now no real excuse not to do so.

IBS has filed comments several times that have requested this extension, on the grounds that the college broadcasters who would be most severely affected by this docket are the least able to effectively respond to it, since it's a rare college or high school station that can afford the batteries of Washington lawyers that the Corporation for Public Broadcasting can. As it turned out, CPB filed for an extension also . . . so that they could do some more research for their own filing. Obviously, they are stockpiling some ammunition, and college radio must do the same!

Most importantly, you must make your voice heard to the FCC. As of this date, at least 14 college radio stations have filed comments with the FCC and sent a copy to IBS. The comments range in size from one and one half page letters to 30 page documents. All are valid, and all will be taken into account by the Commission. How can you do the same? First, do some reading on the matter. For a start, there's the docket itself. That can be found in the Federal Register, Vol. 41, No. 80; Friday, April 23, 1976. You can also get a copy of the docket by dropping me a note at the Vails Gate IBS office. Then, you should re-read the article that appeared in last month's JCR by Dick Gelgaua entitled "Spirit of '76—College Radio." As we have pointed out before, you don't have to have a lawyer or even a fancy sounding title to make your views known to the FCC. Write them out as clearly as possible and send an original and 11 copies to: Secretary, Federal Communications Commission, 1919 M Street, Washington, D.C. 20054. Again, the idea is not to simply voice opposition, although you may indeed do that, but to also add constructive criticism and to suggest alternatives to the CPB backed ideas.

Now, why hasn't the FCC acted so far on docket 20780? That, as you may recall, is the proposal to redefine the limits of unlicensed low-level radiation devices (like walkie-talkies, garage door openers and whole world of Carrier Current Radio). Docket 20780 is intended to revise sections of Part 15 of the FCC Rules and Regulations, which covers all the aforementioned devices. Although the deadline for filing comments on this issue is long past, nothing has been heard from the FCC. Now, the rumor mill has it that the matter of Carrier Current Radio devices may be separated in one way or another from the rest of the docket (which makes sense). However, at least as of this date, nothing has been heard

from the Commission except from the representative who conducted a question-and-answer session at the New England National Conference last month. Alan Meyers, a broadcast analyst for the FCC, told us that the commission tended to handle things on an emergency basis, and that issues like the regulation of CB radios and the structure of televised presidential debates took precedence over revisions in part 15, or for that matter, revisions in the noncommercial FM rules. This means that it might be some time before we hear anything about the big decision on both the FM and Carrier Current dockets. This also means that I'm not going to make any promises about printing the "final" word in the next issue of JCR. It does **NOT** mean that you can safely forget about filing comments on 20735. The cut-off date is still set at January 3, 1977. We would appreciate it if you send us a copy of your comments too, so that we know what you are thinking.

□

After a great deal of time spent in preparation, the first supplement of this year to the IBS Master Handbook has at last been mailed out to dues paying member stations. This supplement is particularly important because it contains the first edition of the IBS Equipment Corporation Catalogue. Plans are already underway for the second edition of this catalogue, as more manufacturers are expressing interest in distributing their products through IBS-EC.

Copies of the catalogue may still be obtained by writing a note to Vails Gate.

□

Finally, as I have pointed out before and probably will continue to point out, JCR invites your comments, your ideas, your news items about your station, and your articles on College Radio related topics. In return for a good article, we will not only print it with your name at the top, thereby virtually insuring your place in the College Radio Hall of Fame . . . we will also send you several extra copies of the magazine to send home to your folks!

□

JCR will be taking a short vacation break after this issue. Our next scheduled date of publication is February 1, 1977. Nominally, the copy deadline for that issue is December 17th, but the magazine stays "open" for a short time after that. So, if you would like to write an article, let us know, and go to it. Really . . . your Mom will be proud of you.

R. A.

# **GOING FM? WE CAN HELP YOU GET THERE**

We're Educational FM Associates and we're in business to help schools and colleges get on the air with FM broadcast facilities. We offer a complete service from the frequency search you must have to determine what channels are available for use in your area, right through to advice in selecting the equipment you need to get on the air

once you have your Construction Permit from the FCC. We are thoroughly experienced in all phases of the FM application process and stand ready to help you get your FM application prepared, on file, and granted by the FCC just as quickly as possible and at a minimum of expense. These are some of the services we offer:

- Complete frequency search and allocation study for your proposed location
- Preparation of printed and bound Engineering Reports detailing all information required by Section V of FCC Form 340
- Step-by-step guidance in preparing all other portions of FCC Form 340
- Free loan of a copy of a granted application from our library to use as a model in preparing your own proposal
- Final review of your application for completeness and accuracy before it is sent to the FCC
- Free help in selecting the equipment you need to actually get on the air.

During the past year we've helped colleges and secondary schools all over the country build their own FM stations. We'd like the chance to work with your school as well. Call or write us for more information. We'll be glad to send you a

brochure which details the services we offer, lists our clients, and shows our standard schedule of fees. We think you'll find our rates very reasonable and we guarantee that all of our work will meet all applicable FCC technical specifications.

# NEW ENGLAND

# COLLEGE RADIO CONFERENCE

by MARK GOVERNOR

Over 125 students and staff of 31 college radio stations attended the first New England College Radio Conference on October 10 and 11. WUMB of UMass/Boston hosted the busy two day seminar, which was co-hosted by the station, the Intercollegiate Broadcasting System and the Massachusetts Broadcasters Association.

Participants were from schools throughout New England plus schools from New Jersey and New York. They came to hear the 22 seminars that covered nearly every aspect of college broadcasting. The most popular session, according to surveys, was led by Danny Schecter of WBCN, Boston, and George Meier, Editor of *WALRUS* magazine. They started a very lively discussion about college programming by contending that college stations were not realizing their potentials for quality broadcasts. Meier said that colleges should be broadcasting "state of the art" programming that differed considerably from commercial FM programming in their respective markets. When students protested that they had to please their audience by programming jazz and rock and what other stations played, Meier countered by saying that the stations should be offering a true alternative. He said that it has been proven many times that when a college station and a commercial station in the same area offer the same kind of programming, listeners generally tune to the commercial station. He offered examples of stations that have successfully found a "niche" by programming music that other stations in their area didn't cover.

Schecter said there should be a philosophy behind each station and the programming should reflect this philosophy. He pointed out that educational FM stations were in the unique position of not having to be responsible to ratings,

advertisers, etc. This provides an ideal opportunity to put a lot of thought behind what stations air, and to think about the future of broadcasting. Students at the session responded favorably to this idea, but expressed uncertainty of how to actually incorporate it into their own stations.

In another heavily attended session, Alan Meyers of the Federal Communications Commission announced that the Commission had decided that broadcasters on 10 watt educational FM stations are no longer required to have the broadcast endorsement (element 9) on their third class license to operate it. He said the FCC was still encouraging people to get thier licenses, though, and they have published an extensive study guide to help them prepare for the test, which is now revised (and a bit more difficult). Mr. Meyers also made the rather startling remark that many of the Public Service Announcements, now being aired as such on non-commercial FM stations could actually be construed as advertising. He said the FCC Rules and Regulations (73:289) read that there will be no broadcast promoting the sale of a product or service. In the case of concerts, Mr. Meyers told the session participants that "concert rundowns" were perfectly legal as long as all the announcements were read at the same time, and no one concert was singled out and promoted.

In other sessions, Judith Brackley of WCAS, Cambridge, led a discussion of women in broadcasting, and also on News Reporting. Dave Gilton of WBCN led a very popular session on third world public affairs programming, and Ed Perry led an informative session on Community Ascertainment. The Station Management session led by Jeff Tellis of WPKN, Con-

COLLEGE RADIO CONFERENCE

necticut and Pat Monteith of WUMB brought up the many problems of licensee control in educational institutions.

Participants polled from all the sessions agreed that the conference was successful, and would help to direct the future of college radio in New England and gave the organizers ideas for future conferences of this type.

## REGIONAL CONFERENCES

*by Rick Askoff*

Where else are they happening?

Why don't they happen more often?

As you can tell from the preceding article, regional conferences can be an awfully good way for the stations in a particular area to get together once or twice a year, get to know one another, discuss common problems and in general, have a good time with people of like disposition. In the past few years, there have been dozens of these conferences, but for the most part, they have tended to take place in or near metropolitan areas, where the college station population is most dense (does that sound right?).

This year, for example, IBS helped to put on the New England Regional, and conferences are being organized in the Western New York State area and the Mid-Atlantic region (New Jersey, metro New York, Pennsy, Delaware, Maryland). There is also a regional conference planned in Southern California. And of course, besides the IBS sponsored conferences, there are other organizations who stage successful conferences and conventions, most notably the Loyola College convo in Chicago (one of the largest and most popular, held in November), and the South East College Radio Association (SECRA) conference, held in Atlanta, last year. There are small get-togethers held all over the country (one of which was held in Maine recently), and no doubt, many others of various sizes and shapes. And, of course, there's the National IBS convention each spring.

That may seem like a lot of pow-wows, but when you consider what a widespread phenomenon college radio is (at least 1300-1400 stations), the actual percentage of stations existing near the site of a regional conference is small . . . smaller than it should be.

In order to insure a successful regional conference, a few rare ingredients must be found. Most important, by far, is the interest of a determined, hard working, volunteer, slightly-to-very insane person or group of persons who are willing to put in the long hours writing letters, attracting speakers, record company reps, other stations . . . and then, figuring out what to do with them once they all arrive (feeding them and giving them a place to sit, etc.), and afterwards, sending out the thank-you notices. All of that work devoted to getting college radio stations together, for no monetary compensation, and precious little in the way of appreciation directly. Understand why it's difficult to put on a regional conference? If you don't, then you're just the person we're looking for!

Each Spring, at the IBS National Convention, volunteers are called for to help organize regional activities. "Activities" can certainly mean a regional conference, but some volunteers in the past have actually done far more than that. Regional newsletters can be published, local tape exchanges and even wire line networks have been organized in some areas.

But, of course, regional directors are generally students and broadcasters first, and regional directors second. Our enthusiastic volunteers at the convention often return home and realize how many term papers are due, and naturally, the region begins to die before it starts.

Still, there are certain areas of the country that have sustained a regional "identity" for many years, even if there were some times where no one was actually running things. And there is no question but that the individual station profit by it. Where ideas are freely communicated, where stations do not have to "go it alone", and where an atmosphere of "community" among separate radio stations are found, that's where you'll find the college stations with the best record service . . . the widest selection of programming materials and the most successful business departments.

*For information on the regions program  
in your area, contact IRS.*

# DIRECTORY OF COLLEGE RADIO STATIONS

The following directory lists some very basic information about college (and some high school) radio stations that are presently members of the Intercollegiate Broadcasting System, the international trade association for all student radio stations.

The stations are arranged alphabetically by state and by institution, which means that all of the IBS stations in each state are to be found in order of their college or university name. At the end of the U.S. listing, the stations belonging to IBS that are located in Australia and Canada are listed.

Information contained in each listing was gathered by sending out two survey forms in the Spring and Summer of 1976. Stations were asked about their call letters, method of transmission and power, hours of operation, format, personnel, etc., and after receiving a certain percentage of the forms back, we attempted to make sense of them so that we could print them.

A typical listing for a station goes something like this:

Call letters, type of signal (FM, CC, CAFM), institution, IBS code number

Mailing address, phone number (Where supplied)

Station power, frequency, school enrollment ("en:"), potential audience ("pa:")

Hours of operation per day (hpd:), per week (hpw:)

Station Personnel (see accompanying abbreviation guide)

Station format

Affiliations (Aff:)

Stations were asked to describe their formats "in a few words", which will explain the wide diversity in listing styles.

If all of this sounds confusing, it's only because the maximum amount of information has been crammed into the smallest possible space. It usually helps if you try looking up your own station. If you find a big mistake there, let us know and we'll try to print up corrections in a future issue of JCR (this is relatively important — the JCR Annual Directory is used by many record companies and equipment manufacturers as "the" sourcebook on college radio).

If your station is not listed, or if it only received a partial listing, chances are that either you are not an IBS member station, or, you joined too late to make the copy deadline, or, we did not receive a completed data banc from you in time.

Finally, there's the question of what to do with this directory, now that you have it. Well, it's really up to you . . . it can be used to compare your station with the way others work, or you can actually use it as a means of getting in touch with other stations. You might be surprised at the fact that there is another college station very similar to your own . . . just down the block.

**Due to a change in format (larger, easier to read type style), this directory is in two parts. Part One lists IBS member stations from A (Alabama) to N (New York State). Part Two will be published in the next issue of JCR.**

or call (212) 585-2717

**SPECIAL COLLEGE RATE: \$24/WK.**

## DRAMATIC PRICE REDUCTION!

Looking for used equipment?

Got some used stuff to sell?

Try a JCR "special" . . .

One whole column inch of space in  
JCR can be yours in our new "used  
equipment exchange", to sell used equip-  
ment, or offer to buy some.

This amount of space was \$17.00 —  
now available for absolutely nothing!  
That's right . . . you can spread the  
word on your slightly used but still  
loveable 10 watt exciter or cart deck or  
tape recorder to every other college  
station in the U.S., Canada and Australia.  
This offer open only to college or high  
school stations, and not to any com-  
mercial enterprises involved profes-  
sionally in equipment sales or service.

Send your copy to:

JCR Used Equipment Exchange  
PO Box 592  
Vails Gate, NY 12584

Be sure to include all applicable infor-  
mation, keep it short, and enclose no  
money of any kind (except stamps).

## the McMARTIN 10 watt FM exciter

B-910 exciter

B-910T transmitter

**ULTRA STABLE** with automatic phase-lock sensing  
**EASILY MAINTAINED** with plug-in modular design  
**CRISP, CLEAN SOUND** from latest DCFM design

... a brilliant new addition to the "full choice line". The solid state B-910 is perfect for your new station, your 10 watt educational application or for updating your existing transmitter. This new exciter/transmitter brings you all the professional "know how" that McMartin has pioneered in SCA/Stereo.

Accessories:

B-110 Stereo Generator

B-113 SCA Generator

transmitter

# THEY'RE EVERY MICROPHONE YOU EVER WANTED.

We've taken the latest advances in electret technology one step further. By combining them with advanced acoustic technology to make professional condenser microphones more portable, more practical and less costly. A lot less.

The secret is our "family" concept.

One common powering module (K2U) serves three different compact heads: omnidirectional (ME20), cardioid (ME40) and shotgun (ME80). Thus, for most studio and location situations, it's no longer necessary to carry three different microphones. Or pay for three different complete units. Each head contains its own microphone capsule and "front-end" electronics, all exactly matched to its own precisely-controlled acoustical environment. Resulting in the first electrets with response and directionality to rival our famous RF condenser models in all but the most critical applications.

The Powering Module, runs on a single 5.6V battery, or phantom-powered directly from your recorder, preamp or other auxiliary equipment. A miniature LED monitors power and indicates proper voltage. Connection to preamps, mixers, etc. is balanced\* low-impedance via a 3-pole Cannon XLR connector. Best of all, of course, is the great versatility. In a matter of seconds, you screw on whichever head you need and go!

If all this sounds good to you, call or write us. We have a lot more good things for you to hear.

Powering module and heads available separately. Prices subject to change without notice.

\*Unbalanced version also available

**SENNHEISER**

## **PD II** **SERIES**

At last—a machine that records and plays mono tapes in the "A" size cartridge, stops automatically on the 1kHz cue tone and—offers you longer life, less maintenance and better performance than any other cartridge machine at an economy price.

### Compare for yourself

- ITC's famous air-damped solenoid with Teflon coated plunger assures super-quiet operation.
- Deck is milled from a solid block of ½ inch thick aluminum. It won't warp...presents the same flat, stable surface to cartridges every time. Assures correct azimuth of heads.
- Heavy-duty micro adjustment head assembly with adjustable tape guides. Designed for easy, accurate adjustments.
- Direct-capstan, 450 RPM, hysteresis-synchronous drive motor—with an electrolyzed shaft—minimizes wow and flutter. Eliminates need for rubber belts and separate flywheel assembly.
- New trim-line design lets you place three units side-by-side in a 19 inch rack. Each unit is only 5¾ inches wide, 5¼ inches high and 15 inches deep.
- Features latest solid state components, even for switching applications. No relays. Printed circuit cards plug in.

Reproducer  
\$550

**Call us and we'll prove it to you**

For complete information call us collect at 309/828-1381. You'll be talking to experienced broadcasters who not only know what ITC equipment can do—but know what you want it to do.

## Vega Wireless Microphone Systems

### *Ahead of Their Time, And Still Improving*

- Crystal controlled, VHF operation for stability and low interference.
- Ultra-sensitive, high performance receivers have 4-cavity, helical-resonator preselectors for sharp selectivity and low distortion.
- New Model 77 transmitter has many improved features. Lemo "Quick-Loc" mic connectors, sturdy noise-free sealed case to resist moisture and corrosive body acids, separate battery compartment, and selectable output power and dual-function meter.
- New single-package and 4-channel diversity receiving systems let you handle severe conditions with extra convenience.

From our low-cost "Orator" model, to our hand-held "Performer", Vega has always been the leader in frequency response, dynamic range, low distortion and effective operating distance. Our transmitters now have all-new compressors that gently avoid overmodulation without harsh clipping, yet won't "latch up" even on gun shots. The unit also has a dual-function meter and selectable power output of 25mW or 100mW. All receivers have multi-function metering and headphone outputs for complete monitoring capability.

In response to popular demand, the Lemo "Quick-Loc" mic connector is now standard, yielding positive contact and longer cable life. Additionally, the Lemo connector will supply bias voltage for electret-condenser mics, eliminating external battery requirements. You can use the professional mic of your choice.

Vega receivers operate from AC, battery, rechargeable battery, or external DC power. There are many more features and products we'd like you to know about, so SEND FOR OUR NEW CATALOG today.

Music of the Incredible String Band, The Sufi Choir, The Beatles, The Moody Blues, Seals & Crofts, Donovan, The New Troubadours, and many others is interspersed with quotations from the writings of Krishnamurti, H.P. Blavatsky, Sri Aurobindo, Baba Ram Dass, Kahlil Gibran, Alice Bailey, Hazrat Inyat Khan, Edgar Cayce, Ramana Maharishi, Rudolf Steiner and more—in addition to quotes from the world's great scriptures and the world's great teachers: Jesus, Buddha, Krishna, Muhammed. Each tape combines music and quotes on a specific theme, and ends with a very brief introduction to The Theosophical Society. The theme titles of the tapes are:

- Theosophy
- Peace
- Brotherhood
- Love
- Man and Woman
- Cycles
- The New Age
- Drugs
- Environment and Nature
- Yoga and Meditation
- Death
- Christianity

The tapes are, in themselves, a musical and meditative experience. The ultimate purpose of the tapes: to raise the consciousness of your listeners.

If your station is interested in scheduling the QRTS into its programming, you are invited to sample a free AUDIT TAPE of two of the programs.

Please send a free AUDIT TAPE and order form to:

## ELEMENT 9 REQUIREMENT RELAXED

In a soon-to-be-released change order in the FCC rules, the commission announced that it will now permit non-commercial FM stations of 10 watts or less to employ operators without the broadcast endorsement on their 3rd class licenses. Broadcast endorsement comes only after an applicant passes the portion of the 3rd class exam known as element 9, and as many would-be broadcast operators have found out, passing that section of the exam is the real exam. Now, however, that's all changed, at least for persons wishing to operate a 10 watt FM station. Larger FM transmitters still require the care and supervision of someone with at least a 3rd class, broadcast endorsed license.

There are a couple of stipulations. 1) unendorsed operators may only make adjustments to external controls necessary to turn the transmitter on and off and maintain the modulation to a normal level; and 2) the transmission system must be equipped with an automatic device to prevent modulation peaks in excess of 100%.

This announcement was greeted with mixed reaction by those involved in student broadcasting. It has been pointed out that while this will be a great aid to people who only wish to work as volunteer operators at a 10 watt station, and who do not plan to find a career in broadcasting . . . anyone thinking of finding a job as a professional broadcaster should obtain that endorsement anyhow. There are few enough jobs open these days to applicants with a 1st class license — let alone those who don't have a full 3rd class.

## ONCE AGAIN . . .

For those of you who missed it last time, here's the stock number and ordering information for the FCC's new guide to the 3rd class exam; title: *Broadcast Operator Handbook* . . .

stock no.: 004-00-00329-2

Price: \$2.60

next column . . .

### Order from:

Superintendent of Documents  
U.S. Government Printing Office  
Washington, D.C. 20402

Send in a check with your order and be prepared to wait.

There are ways to speed up delivery on the new Handbook. One alternate course is to buy the books in quantity, which will save on future waiting time, or, if you live near a major city, you can look up the Federal Bookstore in town. Generally, they will ship by mail, and a lot faster than the central printing office in Washington. The catch is, if you order "too many", they'll just send your order down to Washington for printing and shipping. How much is too much? Better call first and find out.

A quick reading of this new book showed it to be an excellent and comprehensive source of information on the technical side of radio broadcasting. What's more, it is actually designed with an eye towards teaching normally non-technical people everything they need to know in order to pass that tough element 9. If you still need to pass the 3rd class test, with broadcast endorsement, this is the way to do it.

## WOULD YOU BELIEVE . . .

Many college stations around the country have been recently contacted by the Number One Broadcasting Co. of Auburn, Massachusetts. An offer "allowing" college stations to enter into some sort of commercial FM venture, with full funding supplied by Number One, was the latest scheme of its president, Daniel J. Mahoney. Naturally JCR investigative reporters checked it out.

In an interview with Mahoney, JCR found that Number One is "going to be" incorporated in Delaware, and that Mahoney is the only officer (in fact, the only person associated with) this "company." While Mahoney stated he had had absolutely no commercial media experience, he did point to his credentials: a high school education and "talking to people."

When queried as to the source and amount of funding available through his organization, Mahoney gave no definite replies, but did state his belief that he could create a commercial FM station for \$8,000, soup-to-nuts. Mr. Mahoney would, as the age of 20, act as his own engineering consultant and attorney in all matters, with the help of an un-named former FCC employee.

When asked about possible FCC reluctance to accept applications completed by him, Mahoney responded that a Massachusetts Senator would help him prod a possibly balky Commission.

As to equipment and personnel for his stations: All equipment would be donated by unknown local benefactors, and students at local colleges would flock to his

stations, at no pay, "for the experience." Mahoney stated that a "3 KW Motorola" would be a good transmitter for his stations to use. Of course, Mahoney would retain all station licenses himself.

Once the JCR reporters were able to control their mirth, they wrote this article. We recommend that member stations so inclined, and receiving communications from Mahoney or "Number One Broadcasting Co.", promptly place them in the proper file — the round one.

**IBS CONVENTION  
DETAILS ANNOUNCED . . .**

Hotel reservations have been confirmed for the 1977 IBS National Convention to be held this coming April in Washington, D.C. Several factors made the choice of hotels an unusually complicated one this year, but the extra time spent went into bargaining for better room rates and the like. Here's the lowdown:

Where:

The Hyatt Regency Hotel,  
Washington, D.C.

The Hyatt is a brand, spanking new hotel right in the heart of downtown Washington . . . in between the railroad station and Capitol Hill, and only a few blocks from J. Carter's new home. Rates are reasonable, ranging from \$32 a night for a single room, to \$45 or so for a quad. If you have tried to stay in a major city hotel lately, you can probably appreciate those kind of prices.

When:

The weekend of April 1, 2 and 3, '77.

Springtime in Washington is amazing . . . unless you're allergic to cherry blossoms.

What's going on:

The main focus of this year's convention will be on the results of the FCC actions taking place now, and in the near future. These will apply to both Carrier Current and FM stations, so delegates from both kinds of stations will be able to take home the latest information on these topics. Also, for FM stations, this will be the first year of **Ascertainment**, and sessions will be conducted to explain the requirements and problems of this program. Also, record company representatives from your favorite labels will be attending, and IBS is hoping to attract a large number of equipment company exhibitors, to show off their latest wares. Stations should be receiving information on registration at about the same time this magazine arrives.

What you now have is a listing of the national contacts for most of the record companies. What you should do is contact one of the local Top 40/MOR stations in your area and ask their music director for a listing of the local promotion people and their addresses. Constant contact is usually the "name of the game" (unless the record company is dead set against servicing college stations), and if you can call or visit these people weekly or bi-weekly (in addition to a playlist), you'll have a better chance of getting constant service.

## easy-to-operate audio consoles

### a look at just 3 of the 16 spotmaster audio consoles

**5BEM 100** — a dual-channel five-mixer console with plug-in amplifiers and quality performance at only \$890. The 5BEM 100 provides twice the value and has the looks of a console twice its price. For stereo specify the 5BES 100 at \$1250.

**8BES 100** — the pacesetter in value, stereo performance and superb styling.

At \$2195 this big eight mixer stereo console has it all — 8 plug-in stereo preamps, 2 program amps, stereo monitor, headphone and cue amps, 2 speaker/cue/on air relays; accommodates 16 inputs. Monaural Model 8BEM 100 available at \$1470.

**4BEM 50** — a small console priced at only \$535, yet it contains many of the standard features of higher priced units: long-life, sealed mixers; speaker and headphone amplifiers; muting relays; eight inputs to four mixers with high or low level operation. An ideal unit for production or on-air use.

## **ABOUT PREPARING MANUSCRIPTS FOR THE JCR . . .**

The JOURNAL OF COLLEGE RADIO seeks articles and other publishable materials from all sources. The content of such articles should be to improve skills and add to the practical knowledge of college radio station operation and/or broadcast operation in general. JCR also solicits research in the broadcast communication area.

### **LENGTH OF ARTICLES**

Brief articles tend to get the highest readership. Articles run as short as 2 double-spaced typewritten pages, but 5 to 13 pages is the more common length. Authors should not try to write with a goal of so many words or pages. The most informative and useful articles are thorough but "tightly" written. Restraint from the desire to cover many ideas in one article is suggested.

### **PREPARING THE MANUSCRIPT**

Manuscripts should be typed, double-spaced, on one side of 8½" x 11" paper, using margins of at least one inch on all edges.

Lengthy quotations, lists, etc. that may be set in different type or with different spacing, should be indented or otherwise so spaced to simplify instructions to the printer.

References, citations, and footnotes should be placed on a separate sheet at the end of the article rather than at the bottom of each page.

Each page should contain in the upper left hand corner, the name of the article, author's name, and page number.

Graphic materials such as figures, charts, and graphs should be in camera ready form and placed on separate sheets at the end of the article. Markings in the body where each graphic material is to be placed is required. Final placement is the decision of the editors.

The writer should strive for short sentences and short paragraphs. Even complex ideas are communicated most readily when broken down into readable parts.

### **COMMERCIALISM**

Articles written solely to promote the interests of a manufacturer, company, or other commercially involved entities should be avoided.

Also, it should be noted that we are not looking for purely promotional articles on individual radio stations. If an article is to be written about your station, please refrain from listing achievements, numbers of listeners, size of record library, etc. An exception will be made in this policy for articles which attempt to share knowledge on how these things can be obtained.

### **PHOTOGRAPHS**

Photographs enhance the readership of an article. Each should contain a complete caption identifying the people involved and a description of the action. Over-used shots such as a disc jockey at the board should be avoided. Clever and original black and white 8 x 10 glossies are preferred. A photograph of the author is also requested.

### **BIOGRAPHICAL INFORMATION**

Each article should be accompanied by a covering letter containing biographical information that may be used in the preparation of the introduction to the article.

### **CHANGES**

Major changes in an article will be discussed by correspondence between the author and the Editor of JCR. JCR reserves the right to make minor changes and deletions that do not change the substantial meaning of the article.

### **DEADLINES**

JCR requires that articles intended for a certain issue be received no later than 45 days before the issue date. For the school year 1976-1977, the following publishing schedule is in effect:

Deadlines	Issues
October 12	(November annual directory issue)
December 17	(February 1st issue)
January 17	(March Convention issue)
February 17	(April 1 issue)

JCR will acknowledge receipt of a manuscript as soon as possible. Since several editors may be required to properly review certain articles, three to four weeks may pass before the author is notified of acceptance or rejection.

If an article is accepted for future use, it will be placed on file and reviewed at each deadline date. If an author wishes to withdraw an article, the JCR editor should be notified before the next deadline. Editorial office location and phone are listed below.

### **ONE FINAL NOTE**

JCR will supply each author with two copies of the issue in which his article appears automatically and without charge. Five additional copies will be sent to various persons so designated by the author.

Manuscripts, book reviews and all other materials should be addressed to:

Rick Askoff, Editor,  
**JOURNAL OF COLLEGE RADIO,**  
P. O. Box 592,  
Vails Gate, N. Y. 12584  
Phone: (914) 565-6710

# Somebody cares how great it sounds in our anechoic chamber!

We'll stack our Sentry III specifications against anyone else. And we'll easily meet or exceed the claims we make for it. But winning a "spec race" is not the point.

What is important is what Sentry III does in your studio...your control room. And lab tests can duplicate the problem. Only studios, actual day-to-day operations, and highly sensitive testing instruments know as recording engineers, producers, and contractors.

The results are in, and they are well worth sharing. From studios in Chicago, New York, Nashville, and Los Angeles of course. All important stops in between. Comments reflect how well the Sentry III meets actual studio needs.

One constant theme: everyone in the control room hears the *same* sound with Sentry III...everyone judges the same balance. Because Sentry III has unusually wide dispersion. It also doesn't have "lobes" at certain frequencies like a multi-cell. Nor on-axis beaming like older horn designs. Instead, within the stated coverage angle the balance remains effectively constant. A very rare attribute.

Another point: users find that they no longer inch up playback levels during the day to listener fatigue. The Sentry's clean sound also helps their accuracy in later re-mix sessions. And they add that with Sentry III they can more easily hear internal voices...they really hear what's going down.

There's positive comment, too, about bass end, with flat response to 40 Hz, down to 3. Or to 28 Hz with our SEQ equalizer. Only a design that recognizes that each studio has its own problems.

In short, Sentry III works. It's been proven on the job. With continuing field tests turning good theories into better sound. No trick "hi-fi" designs, not re-hashes of old techniques, but a complete rethinking of audio transducer engineering. Make your studio a better place to work with Sentry III today.

Streeterville Studio, Chicago

Pumpkin Studio, Chicago

Sound Market Recording, Chicago

## SENTRY III

15-inch 3-way system

\$726 suggested professional net.
